

JUMPAX THE EASYLAY SYSTEM

This unique product, which is approved by AMTICO for acoustic insulation, is an instant, floating, underlay system for use with stuck down vinyl, linoleum, cork, rubber, Flotex and any other floorings requiring a smooth, even surface. No need for screeds, plyboard, nails, glue or drying time. No mess, smells, lifting old floorings, degreasing, priming or rubbing down. Simply lay out a polythene moisture vapour barrier and then JUMPAX permanently smoothes over small irregularities (up to 3mm) perfectly, every time, with no delays or further work needed. Apart from lightly sanding any slight imperfections on the joints, floor-coverings can be laid immediately.

The two self-adhesive component panels, combining an integral cushioning layer in the baseboard, are laid out brick-bond with the top layer panels overlapping the bottom layer joints to create a large seamless sheet, all permanently bonded together. The pressure sensitive, interactive adhesive develops a stronger bond the more traffic passes over it. An expansion gap around the perimeter allows for any movement that might occur, and at the same time eliminates complicated fitting of both underlay and floor covering. A simple beading, or alternatively re-fixing of the skirting boards, conceals the gap. Architraves and door casings are undercut to facilitate quick, easy fitting into doorways. Clearance holes around pipes, with covering collars, and doorplates complete a very straight forward installation. Only a few standard tools are needed (pencil, tape measure, rubber mallet, knife and 120 grit sandpaper) and the level of skill required is extremely basic.

Floorlayers love it because it is so quick and easy to use, customers love it because it feels so luxurious to walk on, as well as making the job quicker, cleaner and less smelly and inconvenient to have done in the first place. Retailers and contractors appreciate the convenience, time saving and versatility of a truly fast-track system that also solves numerous problems inherent to traditional methods.

Quicker jobs means more jobs which means better profits. Happier fitters and happier customers means more business, which also means better profits. Solving problems makes life easier for everyone, but eliminating some of them altogether is too good an opportunity to pass by, so look again at the benefits that JUMPAX has to offer. European flooring specialists have been successfully using it for 10 Years now, the UK is only just waking up to the possibilities.
